IQ Candy Automating Account Creation

Step 1: School Set-up (done by us)
1. Create a School Account similar to what we do now.
2. Create Teacher License Codes for each subject for that school based on what school purchased.
3. Create Student License Codes for each subject for that school based on what school purchased.

Step 2: Teachers Activation
1. Teacher goes to sign up page and Chooses School from Dropdown (text recognition) and sets up user information:
   a. Name
   b. Gender
   c. Email
   d. Phone
   e. Password
2. Teacher enters teacher license code and is assigned a 6-digit class number for that subject at that school.
   a. Or they can choose from a list of available courses and pay online.
3. Repeat Step 2 for any teacher license codes that have.
4. Teacher provides the 6-digit class number to their students.

Step 3: Student Registration
1. Student goes to sign up page and Chooses School from Dropdown (text recognition) and sets up user information:
   a. Name
   b. Gender
   c. Email
   d. Phone (optional)
   e. Password
2. Student enters student license code and 6-digit class number from the teacher.
3. Repeat Step 2 for any subject license codes and 6-digit class numbers they have.

For self-study (i.e. B2C or no school/teacher), the student would use an universal class number such as 111111 for Math Course 1, 222222 for Math Course 2, 333333 for Math Course 3, 444444 for Earth Science, etc.

Note:
We will need
1. a way for teacher to add activation codes later at any time as they add more subjects.
2. a way for students to add activation codes and 6-digit class number from the teacher at any time as they add more subjects.
